Questions

Que signifie RFID / RTLS?

Qui a déjà réalisé un projet complet RFID / RTLS qui est en service?

Qui a réalisé du profit avec un projet RFID /RTLS?

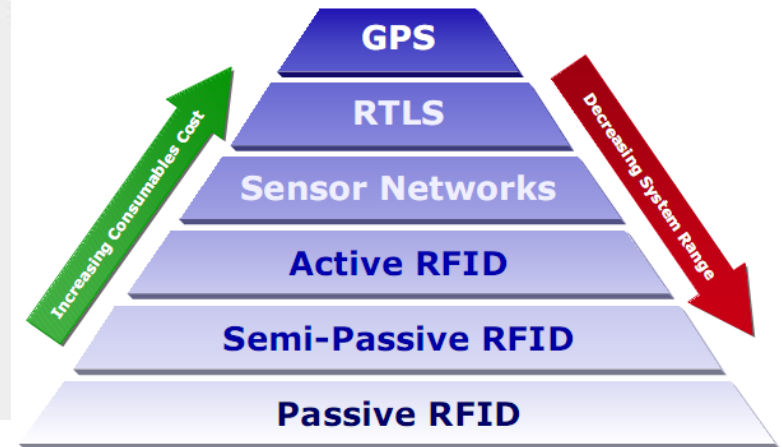

1. RFID & RTLS – Basics

1.1 What is a RFID?

1. Identification & 2. Localisation = Positioning

Positioning :
a. Indoor RTLS
b. Outdoor GPS/Galileo/Glonas

- *) and also :
- IRIS Detection
 - DNA/DNS
 - Handvene-Image

3. Sensoring = Condition Monitoring

1.2 What is a R-T-L-S?

Outdoor

GPS (Global Positioning System)

- USA = GPS (10 Meters – today/now)
- Europe = GALILEO (1 Meter – available 2018)
- Russia = GLONASS (10 Meters – since 2009)

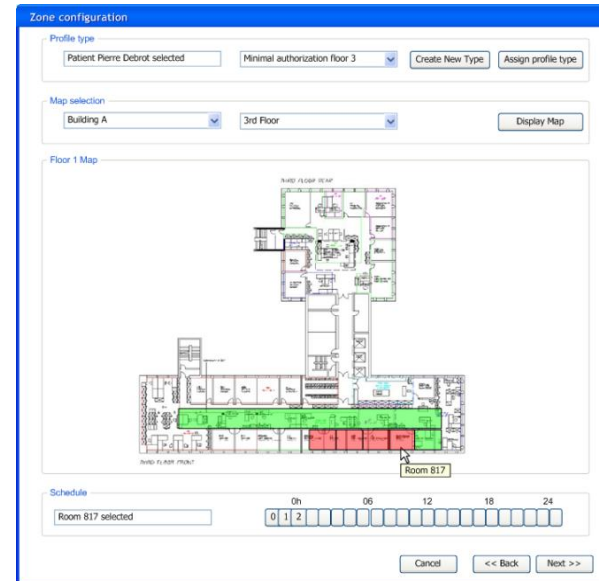

Triangulation with Satellites
(3 Satellites needed for X/Y, 4 Sat. for X/Y/Z)

Indoor

LPS (Local Positioning System)

- A. Active RFID
- B. WLAN based LPS
- C. UWB based LPS
- D. E-INS based
- E. GSM or TV-Signal Triangulation

1.3 Differences of RFID vs. RTLS

RFID/RTLS – What’s the Difference ?

1. Radio-frequency identification (RFID)

... is the use of an object (typically referred to as an RFID tag) applied to or incorporated into a product, animal, or person for the purpose of identification and tracking using radio waves. Some tags can be read from several meters away and beyond the line of sight of the reader.

2. Real-time locating systems (RTLS)

... are used to track and identify the location of objects in real time using simple, inexpensive nodes (badges/tags) attached to or embedded in objects and devices (readers) that receive the wireless signals from these tags to determine their locations. RTLS typically refers to systems that provide passive or active (automatic) collection of location information.

Nécessité d'action en rapport avec la technologie RFID

Rapport élaboré en réponse au postulat Allemann 05.3053 du 9 mars 2005

Le Conseil fédéral a pris connaissance d'un rapport d'experts sur les problèmes liés à l'identification d'objets à distance par voie hertzienne (technologie RFID). Etabli en réponse à un postulat, ce rapport examine les risques liés au rayonnement, au traitement des déchets, à la protection des données et à celle des consommateurs. Il formule des recommandations permettant d'améliorer le cadre général pour une utilisation plus sûre de la technologie RFID.

Le Conseil fédéral approuve le rapport sur la technologie RFID

Berne, 25.06.2008 - Le Conseil fédéral a pris connaissance d'un rapport d'experts sur les problèmes liés à l'identification d'objets à distance par voie hertzienne (technologie RFID). Etabli en réponse à un postulat, ce rapport examine les risques liés au rayonnement, au traitement des déchets, à la protection des données et à celle des consommateurs. Il formule des recommandations permettant d'améliorer le cadre général pour une utilisation plus sûre de la technologie RFID.

3. RTLS – Technologies

3. RTLS – Technologies

Complexity of the transponders/end devices

Infrastructure complexity

RTLS-Technologies:

1. Active Tag Localisation
2. WLAN-based
3. UWB
4. e-INS
5. Passive Tag Localisation
6. Ultra-Sound
7. InfraRed
8. Combined Technologies

RTLS is usually referring to indoor tracking or local positioning LPS (contrary to outdoor GPS)

4. RFID & RTLS Applications

4.1 RFID – Applications

4.2 RTLS – Applications

RFID

1. Mobiler Hilferuf
2. Alarmierung
3. Leistungs-dokumentation

4.3.1 Tunnel – Safety

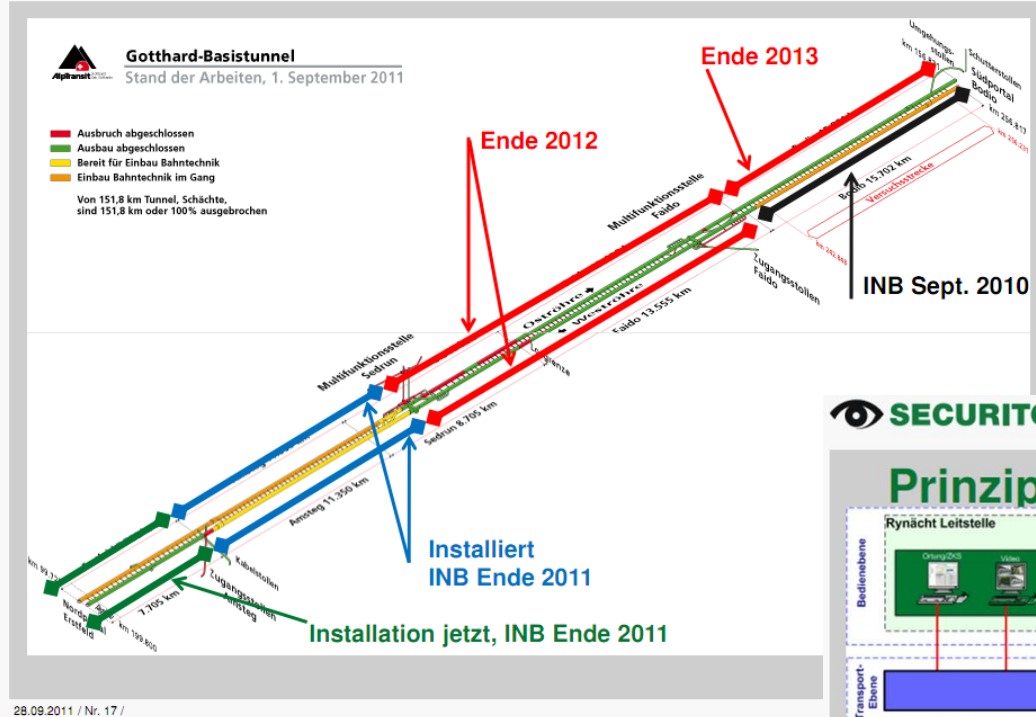

Source: Securiton AG

Workplace Safety in Tunnels

- Permanent Monitoring of 1'000 Persons & Objects in Tunnels
- Mandown activated Tags & Dome Video Cameras
- Alarm with Position and personal Name of Worker
- Alarm Escalation to Pagers, GSM-SMS, Email,
- Events Database for legal & operational Proof
- **Save Life's and Equipment !**

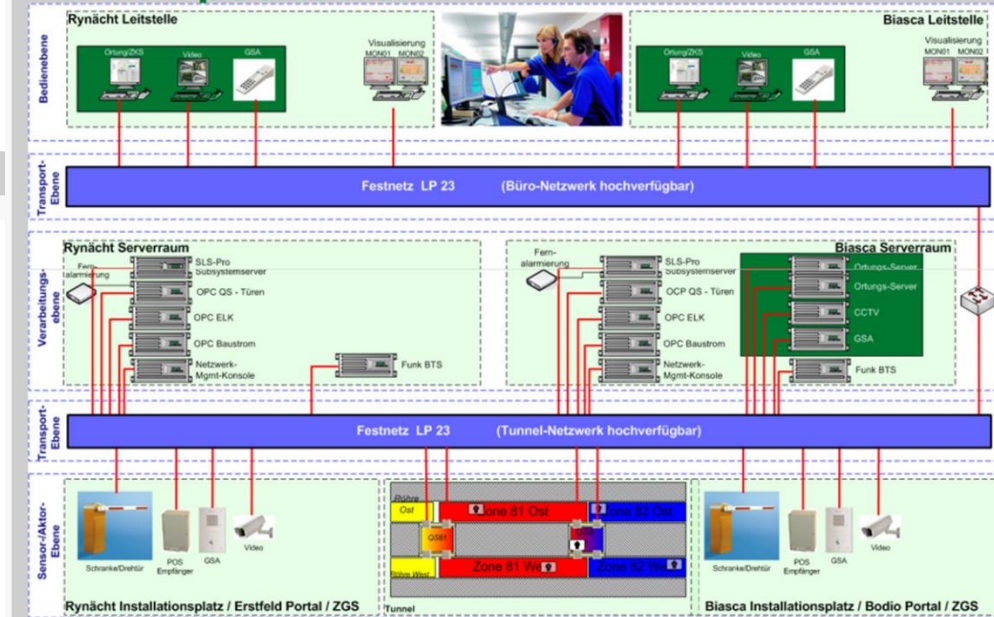

4.3.2 Tunnel – GBT (2x57km)

Prinzipschema

<http://www.youtube.com/watch?v=vgDQ4JCKG9I>

4.4 Healthcare Applications

4.5.1 Bed Management

- **Bed Management at Inselspital, Bern**
 - 45'000 Cleanings / Year
 - 1'600 Beds
 - 1'700 Mattresses
 - 3 Bed centrals
 - 4 stocks
 - ~15 bed types
 - Centralized bed management
- → Video Tagesschau
- → Video Process

4.5.2 Bed Management

- **Application field**

- Hospital Beds

- **Facts**

- Increasing number of bed cleanings a year
- Increasing pressure on costs

- **Issue**

- How to automatically identify beds?
- How to reproduce the process in software?

- **Solution**

- Put an active RFID chip on each hospital bed
- Install readers in the bed centrals and stocks
- Equip bed centrals with touchscreen terminals
- Use Bed Management Application

4.5.3 Bed Management

A complex Process !

Source: pom+

4.5.4 Bed Management – Results

■ Experiences from Inselfpital

- **Less beds = less dead capital = -300 Beds x 5kCHF = -1.5 Mio**
- Less time needed for accounting and billing
- Compliance with yearly security check regulations (STK)
- 20-25% short cleanings, therefore faster process
- Less cleaning products used → better for environment
- No need for control rounds to count beds
- Fully automatic detection, less errors
- **ROI of 200'000 CHF / year**
